## The AUTOBAGGER (Hopper Model)

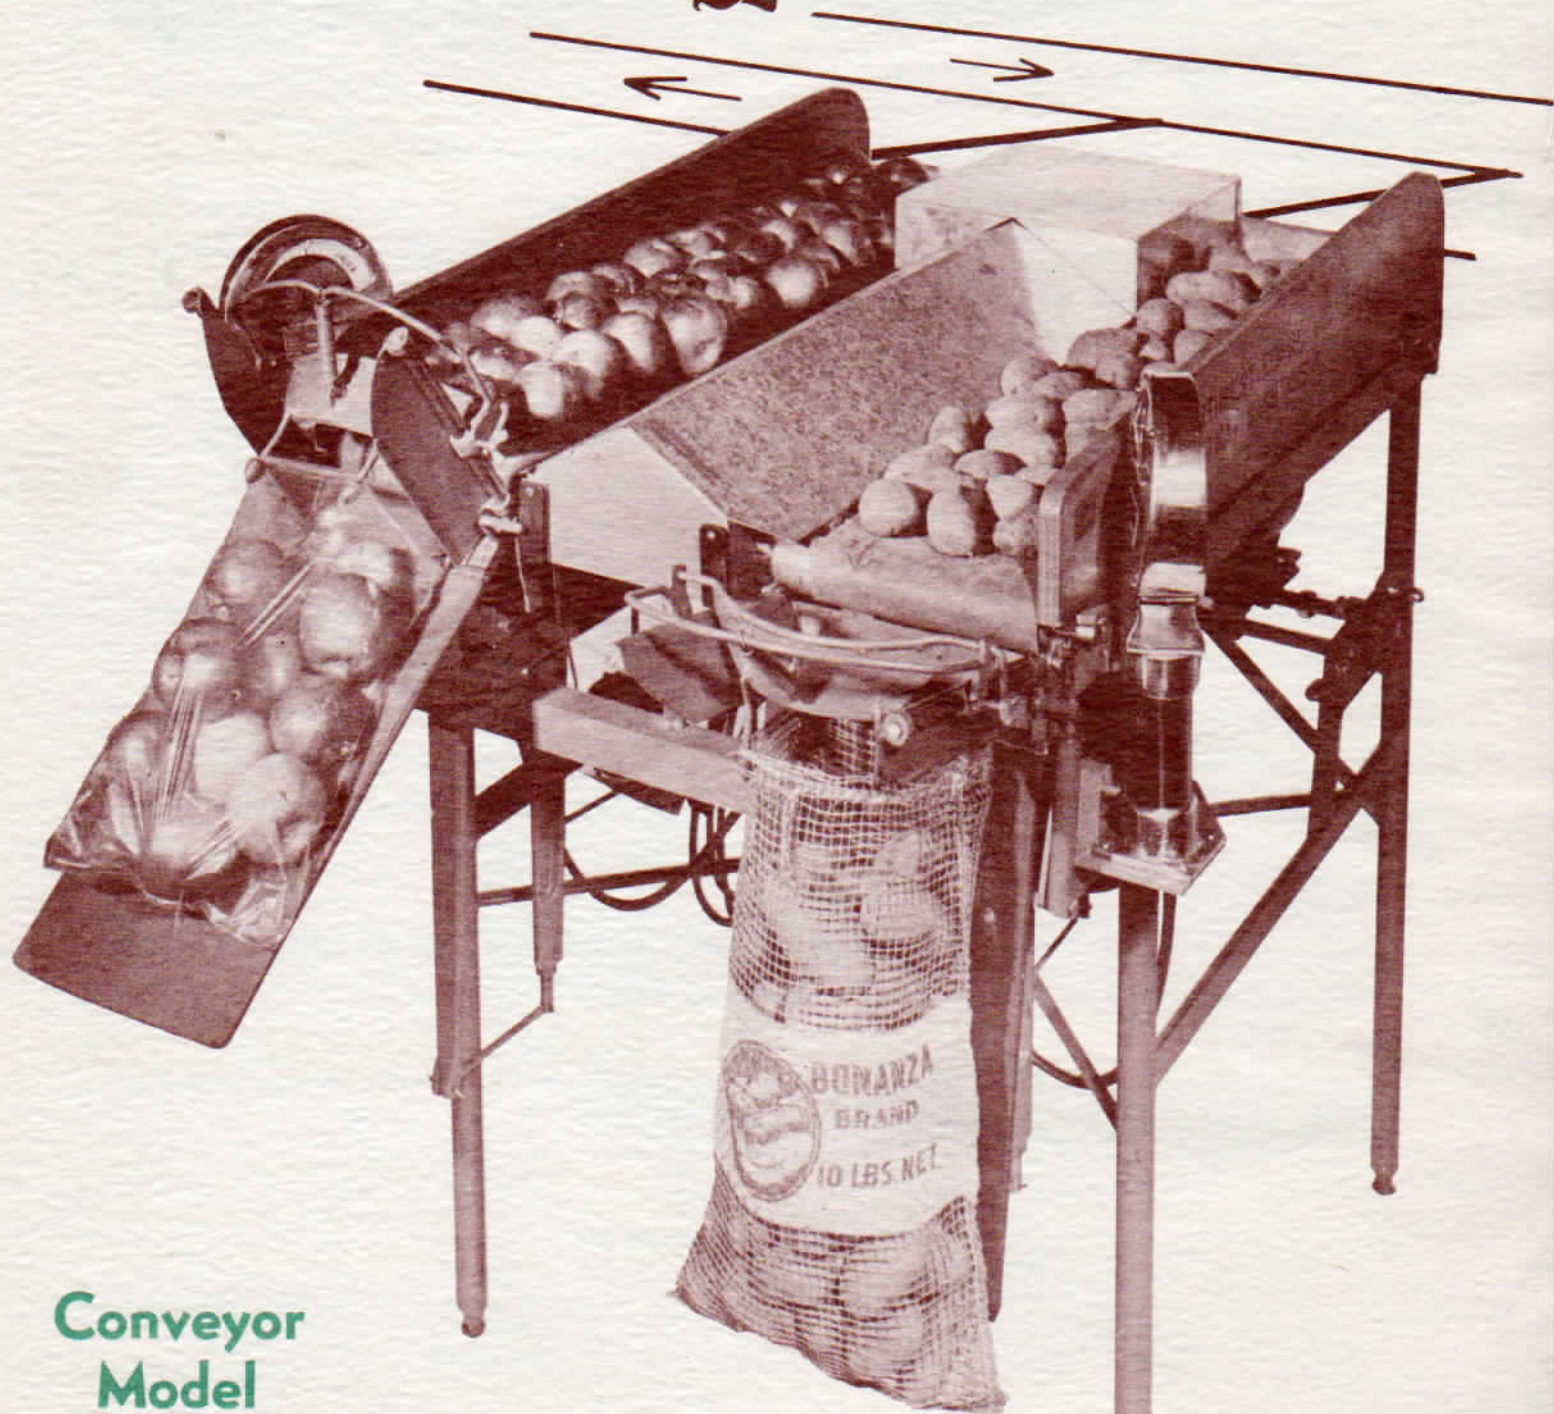

Height of hopper is adjustable . . . can be lowered to dump sack goods into it . . . can be raised to accommodate conveyor feed, or raised to top to sack fruit more easily. Hopper is conical—no corners to wedge or block and damage produce. Dust, dirt and trash are trapped and not fed into the bag.

The Autobagger is versatile, has high production . . . will feed apples into bag at one-pound per second without bruising—potatoes at two pounds per second. Equally fast and gentle on oranges, grapefruit and numerous vegetables. It's a machine of many, many uses. Weighing is quick, accurate on high quality scales. (See back page of general information).

See  
back page  
for details

The new Autobagger automatically fills and weighs all types and sizes of bags from two to fifteen pounds. It is fast and accurate and is designed to allow operator to quickly juggle produce for close weights.

The Autobagger contains two variable speed, trouble-free, level running automatic belts which feed the bag holders mounted on high quality over-and-under scales. This bagger can be fed produce either by dump (optional) or directly from conveyor belt, making it an excellent sacking machine for stores, super markets, produce houses, growers and large warehouses. Rubber tired casters are furnished for easy moving, if desired.

One of the outstanding features of this machine is the controlled tilting bagging heads, which are lifted to start cycle and slowly fall to allow produce to enter bag without dropping, making it possible to fill bag tightly without bruising. This is an essential feature when bagging apples and other tender produce. When sacking produce not easily damaged, machine can be operated by button control.

Bags can be quickly and securely attached to heads without levers, foot switches, or other complicated devices. It quickly adjusts to all sizes and all types of bags from 6 inches to 12 inches in width.

The Autobagger is by far the lowest cost automatic sacker on the market and is simple to operate and service. It has been thoroughly tried and was withheld from the market until all known faults were removed. Two high quality scales form the heart of this machine and are of approved design. They weigh quickly and accurately and can be serviced by any scale man. All electrical parts are of the best quality and are protected from accidental damage and overloading.

The Autobagger is shipped ready to operate from any 110V 60 cycle AC outlet. Floor space needed is three feet by four feet. Height is adjustable.

Lowest cost—simplest to operate—most accurate—smaller in size—faster filling—least damage to produce—and more profit to you.
