

# THE NEW AUTOBAGGER

The New Autobagger automatically fills and accurately weighs each bag without any damage to the produce. It will handle all kinds of bags up to 10 pounds; and the size and weight of the bag can be changed from one size to another in a matter of seconds. All fruits and produce, such as apples, oranges, lemons, onions, potatoes, ectetra, can be bagged with this machine.

The "Autobagger" is sold with or without a box dump and may be operated from any conveyor opening.

One of the several outstanding features of the Autobagger is the controlled tilting aprons which are in motion while the bag is filling. This prevents bruising of produce by dropping while the bag is filling, and insures a tightly filled bag.

The "Autobagger" is rigidly built and all parts are easily serviced.

The "Autobagger" is the answer to your bagging problems, since it will bag all lines of produce rapidly and economically.
