

# NORTHWEST EQUIPMENT COMPANY'S...

## Continuous Flow SCALD CHEMICAL APPLICATOR

- Controlled Time
- Controlled Solution Flow
- Automatic Cut-off to prevent over exposure
- Complete coverage of fruit
- High Production
- Fork Lift Operated

**OPERATION:** Each bin is fed into 10 foot receiving and treatment end. Controlled power rolls support and move the bin beneath cascade of solution pouring through a series of adjustable width wide slots in the 10 foot long treatment section.

Excess solution drips from bin in remaining 10 foot section. The solution returns to the recirculating tank and passes through leaf screens ahead of pump.

Bins continue to move to the discharge rolls. An over supply of bins will shut off pump and drive.

**BENEFITS:** Proper amount of solution is applied whether apple is on top or bottom of the bin.

Continuous production—up to 60 bulk bins per hour.

No operator needed.

Can be used for bulk bins or field crates on pallets.

As with all Northwest Products, the applicator can be designed to meet any packing house needs. The gravity feed rolls and discharge rolls as shown are not included with the basic unit.

### SPECIFICATIONS:

Length 20'

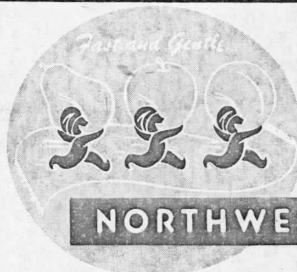

Width 7'

Height 8'

575 gal tank

300 gal per min non-clog pump

$\frac{3}{4}$  hp gear head drive with automatic cut-off wiring not included.

AUTOMATIC PACKAGING • REVERSE ROLL GRADING  
AUTO DUMPING • RAPID SIZING
