

One of seven Northwest Tillers with mesh roller attachment in over 4000 acre Washington vineyard.

7' Tiller with mesh roller in Washington berry planting.

10' Tiller with mesh roller, Napa Valley, Calif., vineyard.

NORTHWEST ROTARY TILLER

For Vineyards and Berries

This is a special modification of the Standard Drive Tiller except the Gear Drive Assembly has been moved inside the tilling area. This is particularly suitable for vineyards and other applications where it is desirable to till close to plants, poles, etc., on both ends of the Tiller. With this modification it is possible to till within 1" to 2" from the outside Tiller frame. The Vineyard Tiller is available in 6', 7', 8', 9', and 10' widths.

See Folder On Regular Tillers For Further Information.
