

The NORTHWEST Rotary Tiller

As Used For The Bed Preparation Of Row Crops

Two 20', 6-row tiller bedders forming 24" wide bed tops at 40" centers, on large farming operations near Los Banos, California.

A two bed tiller is shown forming and tilling the top of the beds only.

Here, two 4-row bedders are retilling and reforming beds in corn stubble field. The original beds were tilled and formed in the only previous operation.

NORTHWEST Rotary Tillers are available in sizes from 4' to 20' in width. The "RB" and "D" Series may be adapted for use in vineyards, row crop cultivation, strip tilling, hilling, chemical incor-

poration, seed bed preparation and tilling in heavy crop residue. The heavier duty "L" Series will accept tractors up to 225 PTO H.P.
